## Teldat Webfilter

***The ultimate solution that allows you to filter content and prevent Malware for safe surfing in your network***

Due to the constant growth of the Internet, network protection in order to ensure a secure navigation experience for users has become an important requirement in all corporations and companies. Teldat's cloud-based content filtering solution, Teldat Webfilter, provides protection through filtering and malware mitigation technology, solving questions like:

- Can I block users from accessing a particular website on my network?
- Is there a simple tool I can use to block access to specific categories of websites?
- Can I block or allow access to specific categories based on time of day or day of the week?
- Can I block or allow access according to websites' countries of origin?
- Can I create reports and analyze the number of allowed or denied access attempts, etc.?

**Teldat Webfilter is the answer to these questions and many more.**

Teldat Webfilter is a tool that requires no additional hardware or software and that can be easily integrated with Teldat devices. Teldat's filtering tool offers reliable and secure control which can be configured quickly and easily. HTTPS-based access to the management interface allows remote and secure connection from administrators. Filtering is implemented using DNS technology which has an imperceptible impact on the Internet performance of end users.

Not only does Teldat Webfilter allow you to filter inappropriate websites, it also allows you to block infected sites that cause computer problems, minimize legal risks of uncontrolled web browsing and eliminate wasted time during work hours. In addition, the tool allows you to optimize the control of your monthly data rate by allowing you to deny access to those sites that consume too much data and that can lead to exceeding the maximum value allowed per month.

---

### Solution features:

- Content control: 54 categories and 0.1% false positives
- Blacklist customization. Teldat Webfilter also provides additional recommendations to achieve desired mitigation
- Whitelists
- Control of applications, domains and IP addresses
- Secure search option: Google, BING and YouTube
- Illegal content control: illegal sexual activities, drugs, software privacy, copyright infringements (music, video, etc.)
- 6-month activity log
- Data packet latency: 0ms (zero – no impact)
- DNS packet latency: typically 10-50 ms
- Static and Dynamic DNS support
- Supports installations with private IP addresses using Dynamic DNS v2
- Cloud availability: 99.9%
- No need for any software or hardware deployments
- Languages: English, Spanish, German, Italian, French, Portuguese and Russian

## Key features

### Filtering content and applications

Teldat Webfilter allows you to create blacklists to block access to specific web pages and categories. When a user tries to access a blocked page, a customizable block page appears and the event is recorded for analytics and reports. Whenever new Internet content is added, Teldat Webfilter detects it and classifies it within 24 hours.

### Malware mitigation

Teldat Webfilter controls threats by allowing you to block ransomware, viruses, banking Trojans, botnets and more than 250,000 variants, completing the function of the antivirus software that the user has installed on his computer or on other devices.

### Traffic analysis

Teldat Webfilter collects up to 6 months of data to create reports, complying with privacy laws like 95/46/EC, BPjM, etc. You can choose from several analytic/report formats in order to help you analyze the information and minimize effort.

### Time scheduling

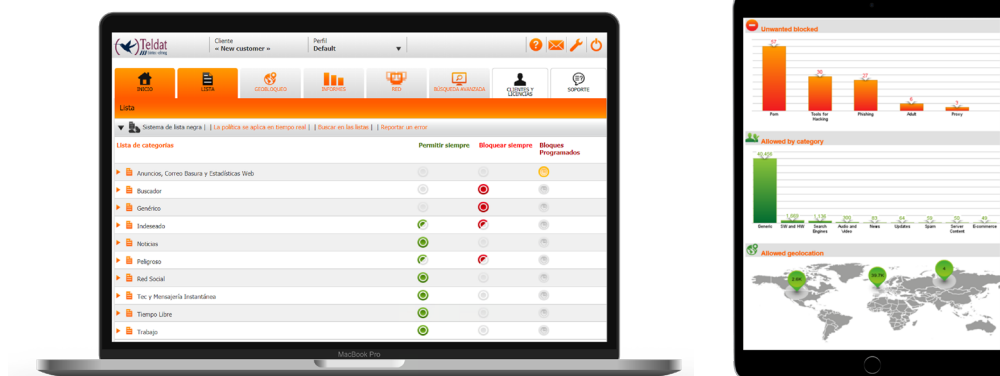

In order to increase the tool's flexibility and adapt to the needs of corporations, Teldat Webfilter allows you to automatically adapt filtering policies according to the time of day and day of the week.

### Geographical control

Teldat Webfilter allows you to identify and block websites according to their country of origin, which can be of great help for optimal use of the network.

### Efficient operations and control

Easy web-based administration that gives IT support teams the ability to manage multiple client networks centrally, quickly and efficiently.
